

Keeping Specialty Medications in our Community Pharmacies

Shire to host Conference Call/Webinar for CSPN Members on the product Firazyr

FIRAZYR (icatibant injection) received approval from the US Food and Drug Administration (FDA). FIRAZYR is the first and only self-administered subcutaneous treatment for acute attacks of hereditary angioedema (HAE) in adults 18 years of age and older. FIRAZYR may be self-administered by patients after training by a healthcare professional. This allows patients to treat acute HAE attacks themselves as soon as symptoms are recognized.

If you receive notice from patients and/or physicians that are having difficulty beginning treatment with FIRAZYR, please direct them to OnePath®. OnePath offers comprehensive, personalized access and administration support for patients 18 years of age and older. OnePath is accessible from 8:30 am to 8:00 pm Eastern Time at **1-866-888-0660**.

Firazyr is a new product in the treatment of Hereditary Angioedema. It is a self-injected product which makes it a great opportunity for our pharmacies to counsel and coach the patient through therapy.

This is an opportunity for our network to begin a relationship in an orphan drug space that has been limited to a buy and bill to this point. I hope that all of you will have the opportunity to participate in this program.

Please refer to the attachments "Order Form" and "Approval All Non Medical Letter". These forms provide you with a number to call to order product when a patient presents in your pharmacy and a package insert that describes the product in more detail.

Please join us for an informative conference call/webinar to learn more about this program and product.
